The present sequence represents the transferrin receptor gene of Raemophilus influences type b, strain SB33. The bacterial transferrin Raemophilus influence type b, strain SB33. The bacterial transferrin receptor is composed of 2 chains, Typl and Thp2. Hinfluencae is a non-encapsulated or non-typable bacterium responsible for a wide range of human diseases. Iron is an essential nutrient for the growth of these control of the access of the transferrin as a source of iron. Antibodies which block the access of the transferrin receptor to its iron source prevent bacterial growth. The transferrin receptor, or fragments, therefore, are good vaccine candidates. The full length Thp2 protein is produced in low amounts in Escherichia coli. However, the yield can be enhanced by truncation of the 3' end of the gene. An immunogenic composition comprising (or encoding) the immunogenic caused by a bacterial pathogen that produces the transferrin receptor. The immunogenic truncated analogue is also useful as an anique in the immunogenic truncated analogue is also useful as an anique in

tbp2. Antibodies blocking this binding site may prevent bacterial growth. Fragments of the TfR (or its genes) are useful in vaccines to provide protection against, e.g. bacterial meningitis. An advantage of using the TfR is that it shares homology with TfR of other H. influenzae strains including non-typable strains.

Purification of recombinant Haemophilus transferrin-binding protein purification of recombinant Haemophilus transferrin-binding protein by solubilising inclusion bedies separated from cell lysate Example 4; Fig 7; 261pp; Engalish.

The H. influenzae transferrin receptor operon contains two genes (tbpl and thep) under the transcriptional regulation of one promoter. The proteins encoded from these genes can be expressed in a recombinant host. The proteins can be used in vaccines against H. influenzae infections or to produce antibodies for use in diagnosis or passive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for use activity - having conserved regions mutated or deleted, for use in e.g. PCR, sequencing and detection assays

Claim 11; Page 59; 185pp; English.

The sequence is that of Thermosipho africanus polymerase DNA which has been mutated. The mutation designated prail causes the polymerases are useful in many recombinate DNA techniques, esp.

C polymerases are useful in many recombinant DNA techniques, esp.

Ducletc acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' unclease activity may facilitate higher sensitivity allelic 5'-3' another action in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and encoding particular regions of the enzymes can be used to prepare a recombinant proteins having 5'-3' exonuclease activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Trible having conserved regions mutated or deleted, for use activity - having conserved regions mutated or deleted, for use activity - having conserved regions mutated or deleted, for use in the activity - having conserved regions mutated or deleted, for use claim 11; Pages 59; 185pp; English.

The sequence is that of Thermosipho africanus polymerase DNA which has been mutated. The mutation designated pTAR09 causes the polymerases are useful in many recombinant DNA techniques, esp. polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic collistration in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity collistrate lack of activity.

Los complete lack of activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence coding for a thermostable DNA polymerase was isolated from chromosomal DNA of Thermostable officanus (Taf). The polymerase (see R23122) has 5'-3' exonuclease activity. Deletion of codon 1-37 results in a DNA polymerase which lacks the 5'-3' exonuclease activity. See Q23917 for the wild-type Taf Pol I gene and Q28936 for another preferred mutant.

Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for use activity - having conserved regions mutated or deleted, for use in e.g. PCR, sequencing and detection assays

Claim 11; Page 59; 185pp; English africanus polymerase DNA which has been mutated. The mutation causes the polymerase enzyme produced to exhibit a different amt. of 5'-3' exonuclease activity than the native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, salf-sustained sequence replication (SSR) and high temp. DNA equencing. The absence replication (SSR) and high temp. DNA equencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity allelic discrimination in a combined polymerase ligase chain reaction (PLCR) assay. An enhanced amt. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a range of recombinant proteins having 5'-3' exonuclease activity to a complete lack of activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
Thermostable DNA polymerases with altered 5'-3' exo nuclease activity - having conserved regions mutated or deleted, for use activity - having conserved regions mutated or deleted, for use in e.g. PCK. sequencing and detection assays

Claim 11: Page 59: 185pp; English.

The sequence is that of Thermosipho africanus polymerase DNA which has been mutated. The mutation designated prafeta's rauses the polymerases enzyme produced to exhibit a different ant. of 5'-3' exonuclease activity than the native enzyme. Thermostable DNA polymerases are useful in many recombinant DNA techniques, esp. nucleic acid amplification by PCR, self-sustained sequence replication (SSR) and high temp. DNA sequencing. The absence of 5'-3' nuclease activity may facilitate higher sensitivity as lealing also assay. An enhanced ant. of 5'-3' exonuclease activity may be desirable alsorimination in a combined polymerase ligase chain reaction (BLCR) assay. An enhanced ant. of 5'-3' exonuclease activity may be desirable in enzymes used in homogeneous assays for the amplification and detection of a target nucleic acid sequence. Mutation of the DNA encoding particular regions of the enzymes can be used to prepare a region of a parget in the prompting of the enzymes can be used to prepare
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                Gaps
               The sequence coding for a thermostable DNA polymerase was isolated from chromosomal DNA of Thermosipho africanus (Taf). The polymerase (see R23122) has 5'-3' exonuclease activity. Mutation of the codon specifying Gly at position 37 (i.e. GGA) to an Asp codon results in a DNA polymerase which lacks the 5'-3' exonuclease activity. See Q23917 for the wild-type Taf Pol I gene and Q28937 for another preferred mutant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human metabotropic glutamate receptor sub-type(s), esp. 4, 6 and 7 - also corresp. DNA and antibodies, useful for identifying cycls. Wich modulate signal transduction activity claim 17, Page 49-56, 110pp; English.

Human metabotropic glutamate receptor subtype 7 (hmGluR7) cDNA clones were isolated from cDNA libraries using a rat mGluR4 probersetal brain partial cDNA clone cRR2, encoding the protein given in R72093, was obtained. The missing 5' region of the clone was generated by PCR from brain cDNA. Sequence comparison of fetal brain and hippocampus clones indicated the existence of 2 subtypes of hmGluR7 (R72097-98).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*tag= b

Thermostable DNA polymerase from Thermosipho africanus - prepd.

Thermostable DNA cells or by expression of Taf polymerase gene in host cells

Claim 8; Page 6; 80pp; English.

Chromosomal DNA from Thermosipho africanus (Taf) was PCR-amplified with degenerate primers corresponding to the amino acid sequences of conserved regions of known thermostable polymerases. When specific PCR products of a similar size to the product generated using Tag chromosomal DNA were produced, the PCR fragments were cloned and sequenced. Fragments with sequences which encoded regions of amino acid homology to known thermostable polymerases were identified. The cloned PCR products were used as probes to screen a genomic Southern blot. The full-length Taf coding sequence was then compiled from various clones. See also Q23918-Q23961.

                                                                                                                                                                                                                                                                                                       Syntherase

Claim 7: Page 41-42; 98pp; English.

This is the nucleotide sequence of a contig of cDNA clones

This is the nucleotide sequence of a contig of cDNA clones

Se2.pk0005:fl. ses8w.pk0010.hll. sfll.pk001.hls and sgslc.pk002.kl2

which codes for full-length soybean dlhydropicolinate reductase

(see W97731). The clones were isolated from soybean embryo (10

days after flowering), mature embryo (8 weeks after subculutre),

immature flower and seed (4 hr after germination) cDNA libraries

and identified by comparison to public sequence databases using

BLAST algorithms. The contig shows sequence similarity to the

Synechocystis sp. enzyme. The invention relates to new isolated

nucleic acid fragments (see X70166-85) encoding plant enzymes (see

W97727-44) that catalyse steps in the biosynthesis of lysine,

threonine, methodine, cysteine and isoleucine from aspartate, the

enzyme being selected from dihydropicolinate reductase,

claminopimelate epimerase, threonine synthase, threonine deaminase

cor S-adenosylmethionine synthetase. The invention also relates to

the construction of a chimeric gene encoding all or a portion of

the biosynthetic pathway enzyme in crop plants such as

corn, soybean and wheat can be used to alter levels of the amino

altered levels of the enzyme in a transformed host cells corn, soybean and wheat can be used to alter levels of the amino

acids in human food and animal feed. Transformed host cells corn, soybean and wheat can be used transformed host cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The DNA sequence comprises a portion of a transposon INS-20 that affects expression and related cellular activity. The DNA has been reacted with advanced glycosylation end products and is typically in the form of an AGE plasmid that can be transfected into cells. The AGE modification of the plasmid may activate the transposons which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   26-JUL-1994 (first entry)

Claim 4; Fig 3; 78pp; English.

Claim 4; Fig 3; 78pp; English.

Mass is a clone encoding a placental pregnancy-specific protein (SPI) also known as pregnancy-specific beta glycoprotein (PSBG) which is detected in placenta and is membrane-bound. The sequence and Abs specific for it can be used in diagnosis, pregnancy testing and monitoring of tumours. The protein has immunosuppressive activity and growth promoting activity and can be used for enhancing fertility in females, viability of a foetus etc.
are captured. Such capture or movement of transposons in a cell be used to treat tumour cells. See also 057059-73. 464 A; 316 C; 353 G: 427 T:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Production of Sialic acids on carbohydrate(s) and the addition of Sialic acids on carbohydrate(s) and the acid addition of other members of the same gene family claim 6; Figure 20; 136pp; English.

Thuman Gal beta 1,3GalNAc alpha 2,3 Sialyltransferase is also called human ST30. In order to clone human ST30 sialyltransferase is called human ST30. In order to clone human ST30 sialyltransferase is conficient or human fetal brain total RNA was combined with each placenta or human fetal brain total RNA was combined with each contain the human ST30 sialylmotif as judged by homology with the portine sequence. A human placenta cDNA library was screened with the contain the human sT30 sialylmotif as judged by homology with the contain the human characterisation of the positive clones revealed cDNA of two types which differed in their 5' ends. The nt shown in Q8287.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; . Cholsted from a nocardioform organism is more stable, more active and free of lipids, it is expressed as an extracellular protein and does not require an inducer. The gene product can be used in assaying cholesterol by determining
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcr diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for detection and diagnosis.

- Web : www.genoscope.cns.fr)
- Determination of this BAC-end sequence was carried out as part of
collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila
melanogaster genome using these BACs. For further information
please see http://www.fruitfly.org The BDGP Drosophila
melanogaster genome using these BACs. For further information
please see http://www.fruitfly.org The BDGP Drosophila
melanogaster BAC library was prepared by Razuctoyo Ososegawa and
Aaron Mammoser in Pieter de Jong's laboratory in the Department of
Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
NY. The library is named RPCI-98 and was constructed by partial
ECORI digestion of Drosophila DNA provided by the BDGP from the
isogenic strain y2; cn bw sp, the same strain used for the BDGP's
Pl and EST libraries. A more detailed description of the library
and how to order individual BAC clones, the entire library, or
filters for hybridization from the BACPAC Resource Center can be
found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä

Petermination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley brosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecori digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the Same strain used for the BDGP's pl and BSI libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://warnar.med hu.ffalo.edu/Afrosophila har htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Drosophila melanogaster genome survey sequence TET3 end of BAC # BACR26H19 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.

Principle of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org the BDGP Drosophila melanogaster BAC ibrary was prepared by Kazutcyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

Determination of this BAC-end sequence was carried out as part of a collaboration of this BAC-end sequence was carried out as part of a thirp.//www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

* NOTE: This is a 'working draft' sequence. It currently
consists of 28 contigs. The true order of the pieces
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the axact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

On Mar 6, 2000 this sequence version replaced gi:7009540.

IMPORTARY: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate contig_ID: 00126_Length: 84.7bp

* NOTE: This is a 'working draft' sequence. It currently

* consists of 28 contigs. The true order of the pieces

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6618 7417: gap of 800 bp 1855 1665 16618 7417: gap of 800 bp 15865 1664: gap of 800 bp 16865 1664: gap of 800 bp 16865 18537: contig of 1873 bp in length 1838 19337: gap of 800 bp 1938 25186: contig of 6849 bp in length 26187 26986: gap of 800 bp 26187 26187 26181 contig of 6124 bp in length 26187 26181 contig of 1124 bp in length 26187 26181 contig of 1124 bp in length 26187 26181 contig of 1124 bp in length

* NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs. The true order of the places

* is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 170439: contig of 170439 bp in length

NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1949 2048: gap of 100 bp 2049 5064: contig of 3016 bp in length 5065 5164: gap of 100 bp 7712: contig of 2548 bp in length 7713 7812: gap of 100 bp 77813 10232: contig of 2420 bp in length

Further information can be found at http://www.sanger.ac.ux/HGP/Chrx/
This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /db_xref="Sptremel:014995"

Note that the variations annotated may not be found in the sequence submission corresponding
                                                                                                                                                                                                                                                                                        Direct Submission
Submitted (05-SEP-1997) Chromosome X Project Group
(http://www.sanger.ac.uk/HGP/ChrX/) Sanger Centre, Hinxton,
Cambridgeshire, CBIO 15A, UK. E-mail enquires:
On Sep 9, 1997 this sequence version replaced 91:2213437.
IMPORTANT: This sequence is the entire insert of clone 339Al8.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The true left end of clone 339A18 is at 1 in this sequence. The true right end of clone 339A18 is at 132805.
339A18 is from the library RPCI3 constructed at the Roswell Park
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 overlapping clone as we submit sequences with only a small
                                                                                                                                                                                      Chordata; Craniata; Vertebrata; Mammalia;
